

IARU Monitoring System Region 1 Monthly Newsletter 12 - December 2020

edited by Peter Jost, HB9CET and Gaspar Miró, EA6AMM

News and Info's

Intruder in December

The last month in 2020 also confirms what we had already observed day after day in the previous months, namely the countless massiv annoying "over-the-horizon-radars" (OTHR) on many bands, mainly on 20m and 40m, but increasingly also on 17m and 15m. Above all, the Russian OTHR "Contayner" as well as OTHR's from China affects amateur radio more and more, sometimes quite massively, at times 3 to 4 stations could be found in the same band. Gaspar, EA6AMM reports that around 66% of all his observations were OTHR. Significantly less to be found were numerous FSK emissions as well as the characteristic CIS12

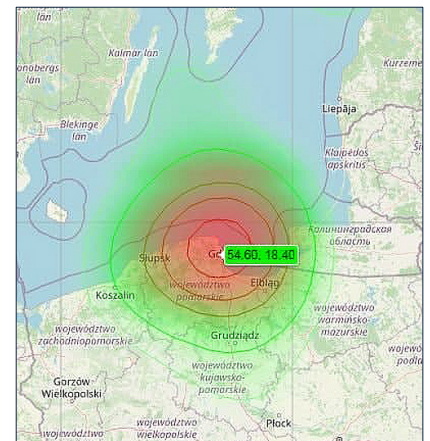

signals from CIS countries (CIS = Commonwealth of Independent States).

For some time now, a Broadcast station is active every day at 1100-1258 UTC at 7200 kHz, which has a massive impact of around 5 kHz on the lower side band of our 40m band. Several TDoA measurements indicate Taiwan.

Also the Broadcast station "Voice of Broad Masses" from Eritrea can be heard daily on 7140 kHz (VOBM1), and increasingly also on 7180 kHz (VOBM2).
